Your Tree Saddle Headquarters
"Making Mobile Better"

6652 County Road 203
Millersburg, OH 44654

330.674.9609

Who We Are...

Mobile Hunting Solutions is a branch of Hill Country Bows. As mobile hunters ourselves, we are constantly testing and researching new products and methods that make mobile hunting better, safer, and more comfortable. Mobile Hunting Solutions was created to bring these products to the plain community.

Mission Statement...

To share our passion for mobile hunting by providing top quality, innovative products to the plain community.

To promote education and understanding on safe, effective methods of use.

Our Purpose...

Our company exists because of the ever growing interest and demand in saddle and mobile hunting. Your requests, comments and suggestions are vital for us to be your foremost supplier for innovative, quality, mobile hunting products.

Advantages of Saddle Hunting

- **Extremely Lightweight Tree Saddles:** Tree Saddles are lightweight, making you more mobile. Perfect for the Public Land Owner! Make sure to check out our new Ultra-Light saddle hunting steps for the ultimate lightweight hunting pack.
 - **Little to no noise:** With tree saddles, you don't get the noise typically associated with putting up tree stands.
 - **Hunters Safety:** While there have been lots of hunters who have fallen from conventional tree stands, when saddle hunting correctly you are tethered to the tree from the moment you leave the ground until you step back on it after the hunt, making it almost impossible to fall.
- Ropes and components are commonly rated at over 5,000 lbs. breaking strength, certified for climbing. We use the same type of ropes and fittings that rock climbers and tree trimmers depend on each time they climb.
- Our saddle systems range from the extreme minimalist Recon to the deluxe comfort of the JX3 Hybrid Saddle Seat.
- We have put together a selection of products from entry level to the latest ultralight gear.

Product Selection

This catalog provides a brief introduction to saddle hunting and mobile climbing systems.

Space does not allow us to feature every product we have available, so please call us with your requests, we may have it on hand!

Due to remaining shortages and shipping issues, prices can change rapidly. **Prices subject to change without notice.**

Order early to avoid the fall rush!

All metal products, platforms, etc. are subject to backorders and production delays.

Liability Disclaimer:

Any climbing activity can be dangerous. Knowledge is important. By placing an order with us, you, the customer, assume all responsibility to understand and apply safe methods of use. Mobile Hunting Solutions assumes no liability for injuries resulting from the use of any product we sell.

Getting Started in Saddle Hunting

To get started in saddle hunting you need 5 simple, but essential pieces of gear:

1. **Saddle**
2. **Tether Rope**
3. **Lineman's Rope**
4. **Platform**
5. **Climbing System**

Many experienced saddle hunters will modify or customize their outfit, but these are the basics you need to get started.

Saddle

Your saddle is a large part of how comfortable you are in the tree, which determines how long you hunt and remain still.

There are 3 main saddle types being manufactured today, including Single Panel, Two-Panel and Hybrid Type saddles.

SINGLE PANEL SADDLES

Single panel saddles have one fabric or mesh panel that supports your bottom. The benefits of a single panel are that they are the simplest design and require the least amount of adjustments.

TWO PANEL SADDLES

Two panel saddles have two smaller panels of fabric or mesh that connect at the sides. This allows you to adjust the panels to suit your needs. The panels can overlap or touch to create a single panel feel, or slide them apart so one is under your bottom more and the other is higher on your waist. Sliding the top panel even higher gives more back support.

HYBRID SADDLES

The JX3 Hybrid Saddle is in a class of its own. A comfortable mesh seat and back panel combine with adjustable side straps that let you find the perfect angle for your back. It's like sitting in your favorite lawn chair.

The down side is more bulk and weight. The webbing bridge and adjustment straps can look a bit confusing until you learn how to use them properly, but they include a good instruction manual.

Tether Rope

The tether rope is what goes around the tree once you're at hunting height and connects to the bridge rope on your saddle with a carabiner. It's your lifeline in the tree. The tether will have a loop on one end and a stopper knot on the other end, with a sliding prussic knot that can be moved up and down the rope to adjust your position on the tree.

Lineman's Rope

The second rope you'll need is the lineman's rope, which is similar to the tether, but has two carabiners – one on the prussic knot like the tether and the other on the loop end, which will allow you to remove the lineman's rope from your saddle by simply unclipping it from the lineman's loop on your saddle. The lineman's rope goes around the tree to stabilize you so you can hang climbing sticks or your platform hands free.

It's not worth risking your life to save a few bucks. Get both a tether and lineman's rope!

New Product Hotline – see centerfold for more information.

Parts of a Tree Saddle

Saddles are usually either single panel or two-panel. Both have their fans. We offer both styles, but do have a preference for two-panel saddles.

Lineman's Rope

The lineman's rope keeps you safe during a climb and allows you to use both hands for setting sticks or steps.

Tree Tether Rope

The tether is your connection to the tree. It attaches to the saddle bridge with a carabiner clip, which is connected to the prussic knot. The prussic slides up or down to adjust your seat height and locks in place when tension is applied.

Saddles in Use

A saddle allows you to hide behind the tree, but still take a shot at any place around the tree.

JX3 Hybrid Saddle System

The JX3 Hybrid Saddle System is unlike any saddle out there. It's called a Hybrid System because it is designed as a saddle and pack system, all in one easy to carry package.

The comfort mesh seat and mesh back panel adjust to provide the ultimate in all day comfort.

Extra gear straps and slots in the frame allow you to attach and carry your sticks, pack, etc. much like a regular frame pack.

This saddle has become very popular with crossbow hunters. Yes, it has more bulk and weight than other saddles, but it's still much lighter and easier to carry than the 20 lb. climber you used to lug around.

This saddle may feel more "enclosed" to you, which some hunters find more appealing. It is not a handicap though. You will find that with a little practice, you can maneuver for all shot angles just like other saddles.

Mesh seat & back

Full back support

Hide behind the tree

All day comfort, adjustable back

Excellent for gun or bow

Easy to pack in with the pack straps built in.

#2024CP

\$40.00

Trophyline Square Accessory Pouch

A nice sized, lightweight pouch with easy top zip access. Slips into your saddle's Molle loops.

#TLSP

\$26.95

Hang Free Saddle Pouch

Everything you need in an easy-to-use top zip pouch. Inside and outside pockets. Designed to be left or right side specific for easy of access. Large enough for a rappel kit.

#HFSPL \$54.99

Left Side

#HFSPR \$54.99

Right Side

Ape Canyon Saddle Pouch

Large enough for a rappel system, this bag has a spring band to help hold the bag open when putting in your ropes.

#5048

\$31.99

The Slap Strap by Hunter Safety System

The simple solution to rope management and climbing safety.

The Slap Strap features an inner spring steel band that grabs the tree and holds your rope in position. A pouch on either side contains both the tether and lineman's rope, each featuring a self-tending prussic knot for a secure hold and easier adjustments.

No need for a saddle pouch.

Can be worn around your waist.

One handed rope adjustments.

Both ropes stow neatly in pouches.

Keep steady going up sticks.

Slide up stays put.

Now you can get your tether rope out and connect it, stow away the lineman's rope back in the pouch. Gear loops on the band let you attach clips or hooks for range finders, etc.

Available with Double or Single Ropes. Each comes with 2 pouches.

#SSTL	\$179.00
2 Ropes - Tether & Lineman's	

#SSTR	\$139.00
Tether Rope Only	

Note: **Carabiners are not included.** Double Rope will require 3 carabiners. Single Rope, 1 carabiner. Order carabiners on page 30.

Too much slack = Dangerous!

Slack easily adjusted with one hand.

The MHS Difference

8mm Predator Ropes

All our saddle tether and lineman ropes come rigged with a prussic tender for smooth one-handed adjustability.

All Saddle Kits with ropes will be rigged with tenders.*

*except the Tethrd Workhorse

Predator 8mm Ropes

Predator Ropes in popular 8mm thickness. Predator has been used for many years in the thicker 11mm size, which is way more than needed for saddle hunting purposes. The Predator 8mm packs small and handles smoothly. The built in prussic tender makes one handed adjustments a breeze to do.

9mm Canyon Elite Deluxe Ropes

Smooth handling with extreme durability make this a customer favorite. Fitted with the Ropeman 1 rope grab for silky smooth, one-handed adjustments. Quite simply the best rope you can get. This is the most flexible 9mm rope available.

Workhorse Platform

The perfect compliment to any saddle hunting set up. Get 360° shooting around the tree with ease and comfort. A great blend of good platform size and minimal weight and bulk. Packs nice and flat for transport and attaches with the included cam strap.

Regular Platform Weight: 3 lbs.

#WHP	\$175.00
Regular Platform: 12" x 13"	

#WHPXL	\$195.00
Extra Large Platform: 12" x 15.5"	

Latitude Profile Platform

This platform is the most compact platform in this price range. The recessed post design and the folding standoff delivers a compact 1¼" profile. The front edge has a slight angle to reduce foot pressure points. The angle adjustment knob is easy to access.

Smooth outside edges and slim thickness make this platform a breeze to pack.

Platform Size: 12" x 14"
Platform Weight: 3.4 lbs.

#LPL	\$269.00
-------------	-----------------

Only 1¼" thick when folded up

The EDP Platform

#3015

\$189.99

Introducing the strongest, sturdiest and most durable platform EVER BUILT! Meet The EDP, The Everyday Platform.

- 13.5" W x 13" D
- One piece Cast Aluminum Platform
- Weight: 3 lbs. 13 oz.
- Platform Leveling System
- Offset Bracket
- Easy to Use cinch belt included
- Fits trees 4" to 22" diameter
- Non slip ridged grips and texture on top of the platform
- Boot grabs on the outer edge
- Folds flat with no metal on metal contact
- Strategic outer edge design for accommodating many different foot placements.
- 300 lb. weight limit

Hyperlite Platform

Hyperlite™ – Beyond Ultralight.

#HLP24

\$299.99

Hyperlite Platform
12" x 12"
2.2 lbs.

- **Lighter** – weighs 2.1 lbs. Made from magnite™ which is 35% lighter than aluminum and 50% lighter than strength equivalent carbon.
- **Stronger** – made from magnite™ which is 22% stronger than aluminum
- **Quieter** – Absorbs 3 times more vibration than aluminum and 10 times more than carbon.
- **More Compact** – Flatstack design allows the hyperlite climbing sticks to pack directly in line with the platform, eliminating the platform's cleat in packability.
- Fits trees 8" – 22" diameter.
- Cam Strap attachment method.
- Weight limit – 300 lbs.

Hang Free® Attachment System

Introducing the premier way to attach platforms or sticks. The sliding prussic knot now has an integrated tender for smooth adjustability. The 3/16 version is great for getting your platform or tree stand rock solid, while the 1/8" is used for climbing sticks.

#HFAS8

A quiet, simple and secure way to strap sticks, platforms or whatever. Tough, stretchable rubber.

#XOOPGS	\$12.99
Per pair	

What's the best way to climb a tree? How do you get up the tree? We get asked these questions a lot. This Climbing System Guide is based on over 20 years of experience using, testing and re-searching many different climbing methods.

■ Climbing Sticks

Sticks are the fastest way up a tree, especially when used with multi step aiders. They are the easiest for most people to learn. The drawbacks are: bulkier, heavier and often noisier. Using stealth strips on your stick contact areas will really quiet them down. Recently much lighter sticks have been introduced such as the Hyperlite, Carbon SS and The Tethrd One. These will cut weight by about one half.

■ One Sticking

One sticking is simply using only one stick, usually with a multi-step aider and a specially modified stick with a built on platform. It appeals to many since it lets you climb any tree to any height with only one stick. It is also very compact and lightweight.

■ Rope Climbing and 2TC Climbing

It doesn't get lighter or more compact than 2 Tether Climbing (2TC). It's not difficult, but takes time to get the feel for it. Properly done, you can climb any height and back down. Rope Climbing or single rope technique (SRT) requires 30 or more feet of rope and several specialized fittings and learning how to use them. When done properly, rope climbing is the safest way to climb and descend a tree. However, strict attention is required to correct safety methods at all times.

One Sticking, Rope and 2TC will commonly use rappelling as the way to descend a tree since it is the safest and fastest way down. Plus, it's really pretty fun!

Climbing sticks.

A platform provides better foot comfort and maneuverability.

Proper Lineman's Belt and Aider Use

Using aiders has become very popular because it is a simple way to gain extra height with minimal added weight. Aiders vary from single steps to 3, 4 or even 5 step aiders. Most are made of webbing or tough, but lightweight Amsteel® rope. Aiders are either fixed (stay on the stick), or movable (only one aider is used) and you move it up with you as you climb. There are several important things to remember when using aiders.

1. Short aiders are less likely to swing or "kick out" than longer aiders.
2. As with all climbing, aider use requires using care and the proper methods of use.
3. We believe the following method is the **only safe way** to use an aider.

1. Lineman's belt properly angled up. Hands on belt for stability. Adjust slack as needed.

2. Foot properly seated in aider. Keep toe firmly against the tree. **This is extremely important!**

3. Move the belt up with **every** step! Never let it go below waist high.

4. Foot is properly set in aider, with toe firmly against the tree. Leaning your weight into the belt helps maintain your balance.

5. Ready to move up again.

Tethrd ONE Climbing Sticks

The ONE climbing stick is the lightest full featured stick on planet Earth. The one piece step / standoff creates a generous boot step size for comfortable climbing and great traction. This stick is fiddle factor free. The Dynalite rope system with X-locking design is fast, silent and secure. Did we mention easy?

- 16.5 oz. per stick
- 3 pack weighs 3 lbs. 2 oz.
- 4 pack weighs 4 lbs. 3 oz.

Skeletors

Introducing the most feature packed climbing stick that won't break your budget.

Skeletors come in 4-pack ready to hunt.

The Skeletors are built with a folding dual step design that folds AWAY from the tree. Folding away from the tree gives the hunter more room for their feet when climbing.

The Skeletors attach to the tree with our patented DynaLite rope and tab. It's the most user friendly, lightweight, simple and fast connection method in history. There are no heavy buckles. There are no mechanical pieces. There is no fiddle factor.

Stacking your Skeletors for transport is a breeze with our built in StickLoc pin system. Simply align the pins and stack away.

2TC - Two Tether Climbing

USE TIP: Stiffer rope such as 9mm or larger works best. Not recommended when using the 8mm Predator rope. A single rope Slap Strap is a great option for your top tether.

By adding a few small pieces of gear, you can now climb with just your saddle and ropes. By utilizing a foot loop on your second rope, you create a stand up – sit down climb method.

Here's how it works: Your tree tether is connected to the tree and moved as high as you can reach. Your lineman's belt is connected to the tree like a tether rope, about 12" lower than your actual tether rope. Your foot loop connects to the lineman's rope. This is for your left foot, for most people. Your saddle is hooked to your tether and as much slack taken out as possible. See photo sequence below.

Foot loop set.

Ready for the first step up.

First step up.

Move your tether rope up, then sit down.

With your right knee braced against the tree, move your foot loop tether up.

Grab the tree and stand up for the second move up.

2TC Complete Kit

Includes: Foot loop, Quick link, Ropeman 1 rope grab and a carabiner*. The quick link allows easy on and off when you need to go above limbs, and the ropeman lets you raise your loop foot a good bit higher on each move, for faster climbing.

*Also includes a 1/8" Amsteel® Daisy Chain to use as an extra tether when you need to move around branches.

Adjustable Foot Loop

#2TCLOOP

#2TCKIT

\$119.00

One Sticking

Why One Stick?

- Carry Less weight and bulk.
- More options in hunting height. Easily, and safely, climb 20, 30 or more feet.
- Use virtually any tree that your rope can reach around. (Don't climb a 4" tree, ok!)
- Allows you to quickly reposition to a different tree if needed.
- Rappelling down is the safest descending method. No worry about slipping or missing steps in the dark.

What you Need:

Sticks especially designed for one sticking make it much easier and smoother. Sticks with attached platforms mean you don't need to carry a separate platform. Almost all one sticks have a cam cleat and rope for quick and easy attachment and removal. A rappel kit allows you to easily and safely descend. See page 28 for rappel information.

1. Be aware of how the tree leans before starting up.

2. The linemans rope helps steady your climb.

- 3.** Attach your rappel rope to the saddle and clip linemans belt out of the way.

- 4.** Lower to a sitting position and remove your stick.

- 5.** Fasten your stick above you again and repeat climb process.

- 6.** Always move your tether up with each step to reduce slack.

- 7.** A good platform will increase all day comfort and allow better positioning for unexpected shot opportunities.

- 8.** Use your knees to help position and stabilize your shot. Knee pads are advised.

Wingman One Stick

This stick features a larger, contoured platform that is very comfortable. Set up with camcleat, one stick rope and 2 step sewn webbing aider. An excellent value in a solid performing stick.

#WM052

\$330.00

Specs/Features:

- Length 18"
- Platform - 8" x 12"
- 4 lbs. 6 oz.

Shikar Mini One Stick

Measuring only 10 1/4" long and weighing in at 2 lbs. fully loaded with a 3 step aider attached. If you use a separate platform and just need a way up the tree, this will do it in a very small package.

The steps and standoffs can be unlocked and folded almost flat. If you want one that folds completely flat, call us for options.

Standard stick will come with 2 steps, camcleat, one stick rope and 3 step compact aider.

#SMINI3

\$258.00

Slick Rick One Stick

The ultimate One Stick!

The Slick Rick is the first one stick to be equipped with both a folding top and folding bottom platform for incredible packability. The Slick Rick utilizes an adjustable top platform to give the user the most comfortable angle for your feet.

Fully set up with a 3 step webbing aider

Packs flat!

#SR100

\$489.00

Specs/Features:

- Length 12"
- Platform - 8" x 13"
- 4.2 lbs.

Pinch Point One Stick

Lots. Of. Foot. Room. That's what this stick is all about. Works great with the Kozy Kote body suit, or if you just prefer the maximum amount of foot room. For easier climbing, the front section folds up out of the way and can be used as a grab handle to release your stick.

Completely set up with a 3 step webbing aider

#PP2412

\$499.00

Specs/Features:

- Length 12"
- Platform - 10" x 14"
- 5 lbs. 11 oz.

**OVERSIZE

Add \$12.00

Plain Jane One Stick

This stick features the best mid size platform out there. The platform is wider than most for more foot room, and the slightly bent front edge is just right for improved heel comfort. A great balance of size and weight.

Completely set up with a 3 step aider.

#PJ243

\$356.00

Specs/Features:

- Length 12"
- Platform – 7½" x 13½"
- 3 lbs. 7 oz.

Solo One Stick

The most compact, fully functional one stick available. At only 2 lbs. and extremely compact, this is just the ticket for the minimalist hunter. The platform base provides a solid bite on the tree with the unique cam over feature.

The tree rope is the HFAS ¾ Amsteel attachment system with sliding friction knot. This is a super strong, featherweight and completely silent attachment method that simply hooks over the platform button. The HFAS is featured on page 42.

The 4" x 10" platform has a grooved surface for good boot grip when maneuvering for a shot.

#SOLO1

\$249.00

Specs/Features:

- Weight: 2 lbs.
- Size: 10" x 6" x 4"H

MHS Scout One Stick

A handy size stick featuring the popular compact Scout platform. Completely set up with 3 step aider. Pull up handle included.

#24S13
\$320.00
Specs/Features:

- Length 14"
- Platform – 4" x 10"
- 2 lbs. 14 oz.

Step to step distance 12".

Available flat or angled.
If unsure, order flat

MHS Lil Joe One Stick

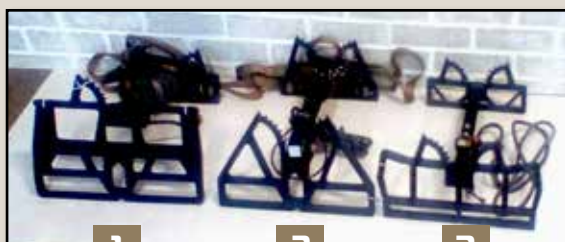

The "Lil Joe" platform folds up for easier packing and has a angle adjustment knob. Completely set up with 3 step aider.

Note: Image shows a 14" stick – standard size is 12". A very handy minimalist stick.

#24LJ3
\$398.00

Rappel Systems

Rappelling has rapidly become popular as more hunters realize how much safer, quieter and easier it is compared to the uncertainty of climbing down steps in the dark.

To rappel you need:

A climbing grade rope, descender, carabiner and a pull down (retrieval) cord. Also commonly used are quicklinks for easier attachment and tether locker clip to keep the loop snugged to the tree.

Ropes:

Rappel ropes are designed to withstand the force and repeated friction of your descending device. They typically have ratings of over 5,500 lbs. test.

Descenders:

There are various descenders available – from a simple figure 8 to the MadRock Safeguard and Vergo. We recommend using an autolocking descender, such as the Safeguard, that will stop descending as soon as you let go of it. Descender options are shown on page 32.

Did you know you don't need a saddle to rappel? If you are hunting from a stand, you can rappel down provided your safety harness has proper leg straps, lineman's loops and waist belt. Not as comfortable as a saddle, but it works. A common question is, how do you get the rope down? This is done by attaching a pull cord to the tree loop before descending.

Attaching pull down cord.

The right hand controls speed of descent. The left hand opens the brake handle. Always use both hands!

After descending, pulling the loop away from the tree will open the loop. Pull until end is completely free.

MHS 9mm Rappel Kit

Includes 35 ft. 9mm Canyon IV rope, Quick Link, Tether locker clip, Mad Rock Safeguard Descender, 40 ft. pull down rope with clip on a handy spool for easier cord management. Instructions included.

Deluxe 40' 8mm Predator Rappel Kit

#258VK

\$240.00

We are excited to introduce our Deluxe 8mm compact rappel kit. The new 8mm Predator rope is nice and flexible and feeds smoothly through the Vergo descender. The Vergo descender is the best option we have found for the 8mm rope. The Vergo is easily attached or removed from the rope. In our experience, the Vergo tends to feed rope more smoothly than the Safeguard.

Rappel Hardware

Mad Rock Safeguard

Ascending, descending device for climbing and rappelling for 9mm to 11 mm ropes. Auto locking and attaches quickly and easily.

#2047

\$119.00

Vergo Descender

We are excited to offer this descender to you as another solid option for rappelling and one sticking. Clips on and off the rope easily. We find the Vergo makes it easier to control the rate of descent. The release pad opens a little slower, which gives a smoother descent. The Vergo is also less prone to twist or kink the rope while descending.

Our #1 choice for 8mm ropes, but works well with up to 11mm ropes.

#25VD

\$119.00

Kong Futura Hand Ascender

Ascender rope clamp for 8 to 12 mm ropes. These are minimalist hand ascenders and very compact. When used with a foot loop, you can use it to climb your rope. Left hand.

#4073

\$110.00

Kong Duck

Kong Duck rope clamp for 8 - 9 mm ropes. Works great on your lineman belt or your tree tether to quickly adjust length with one hand. These come in black and are an excellent replacement for a prussic. If you are using a lighter rope in the 8 - 9 mm range, this is the mechanical rope clamp you should be using. Must be used with oval carabiner.

#4072

\$75.99

Ropeman 1 Rope Grab

Silky smooth, easy, one-hand adjustments for your lineman's or tether rope. 9mm to 11 mm rope.

Ropeman 1
installed on rope

#4074

\$56.99

SRT Climbing (Single Rope Technique)

Using the Compact SRT Kit

Adding a SRT system to your rappel kit allows you to climb back up your rappel rope. It's quite handy if you drop something, answer nature's call or want to leave the rope in the tree for multiple hunts. A very fast way up a tree.

Getting a Rope in a Tree. The two best options are using a throw ball to get a throw line over a sturdy branch or using a paracord preset which needs to be placed beforehand. Paracord is left in the tree and you use it to pull your climbing rope up when you get to the tree. It is extremely important that you know how to safely get your rope attached up in the tree.

Using a Foot Loop with the Quick Roll

Notice the correct shortened bridge length. Foot loop is clipped to the ascender. Safeguard is connected to saddle.

Push ascender up.

Standing up while pulling on the rope advances you up easily.

Using The Quick Roll (no foot loop)

Push ascender up.

Simply pull up to advance.

Repeat.

CT Quick Roll Hand Ascender

The ultimate SRT climbing ascender. Fits all common rope sizes. The micro pulley gives you a mechanical leverage, making it easy to pull your weight up the rope. Can also be used with a foot loop for the most effortless way up a rope. See page 33 for more information.

#CTQ

\$169.00

Replacement Amsteel Rope Bridge

Fully adjustable and openable bridge design, now comes in Amsteel. 33" finished length. Right or left hand use. Weighs 2 oz.; 3½ oz. with carabiner.

GC ONE Movable 3-Step Aider

Built with the same quality and pride we put into all of our other products, the GC-ONE Aider was specifically designed to work on the Tethrd One Stick but has quickly become a go to aider for a wide variety of double-step sticks in the 16"-18" range. A 3/16" shock cord allows the GC-One to be stretched over the ends of the steps, giving it a snug fit so you can be confident that it will not move. We also designed the leash to allow you to pull the aider off of the step without having to bend over, making for a very smooth and effortless climb.

While the GC-ONE will work on all double-step sticks within the 16"-18" range, it may not come off the steps with the leash leaving you to reach down and manually remove the GC-ONE.

This aider makes a great combo with almost any double step climbing stick. With 3 sticks and this aider you can climb 20 plus feet quickly and easily. Remember to properly use your linemans belt when using this aider.

#4023
\$79.50

Movable 3-Step Hook Aider

by Backwoods Mobile Gear

Built to function like the GC-ONE but with the S-hook that allows you to hook it to the bottom step of a stick. Also used with the V-Step system. Sturdy and well built.

Dead Silent Systems

Amsteel® Daisy Chain

Shown with Shikar 17" climbing stick

All of our daisy chains are made from Amsteel®. These daisy chains make attaching climbing sticks to the tree fast and quiet. The absence of anything metal allows for whisper quiet attachment and packing. The links are 2.5" making these easy to get on and off of any versa button. Also available in a heavier $\frac{1}{8}$ " thickness to use on platforms.

For sticks we recommend a double wrap, meaning to around the tree, under the button, and then around the tree again, pull tight, then loop into the closest loop. Much better than a single wrap.

Available in black!

Super compact!

#6022

\$14.95

Fold n Go Gear Hanger

The perfect companion to your HYS Strap. Simply slip into the loops, all set, folds up out of the way if necessary.

#24FG

\$19.99

HYS Strap

The ultimate public land legal gear hanger. You can hang it. You can girth hitch it. You can T-Hook it. You can wrap it around a tree trunk. You can wrap it around a branch. Whatever works for you.

The HYS Strap is made of high strength, mildew and rot resistant polyester that enables you to hang your stuff in whatever way makes sense to you. Put some stuff around the back side of the tree, some on the left, and some on the right. You can easily move your gear and position it wherever it makes sense for your style of hunting. To attach it, simply girth hitch it with any of the existing loops, or use the included T-hook for a quick connection. If you hunt small trees, cut it to length. You won't hurt anything.

The Fold n Go (above) works perfectly with the HYS Strap. You can use S-Biner Hooks for your gear.

- 7' long can be cut to length for hunter preference
- Ultra-light at 6 ounces
- $\frac{3}{4}$ " webbing for ultra-packability
- $1\frac{1}{4}$ " distance between "links"
- T-Hook included
- Coyote tan for maximum concealment

#5066

\$29.99

HYS Straps are not intended for life support systems like a lineman belt or tether.

Easy to hook on.
Pull to tighten.

Smaller, nesting
package

Compact Gear Hanger Strap

Taking a proven design and making it even better with a folding bow hook that nests with the included gear hooks for a more compact package. Plus you get the benefit of the hook folding up out of the way.

#2450

\$44.00

Folding Bow Hook

The perfect bow hook for the mobile hunter. Slips into the loops on the HYS or Latitude straps, or any other 1" strap.

#5067

HPE Hip Pinch Eliminator

Considered one of the best new products from last year. This is a great way to make your saddle even more comfortable. No more hip pinch! Very simple to use and can be quickly unhooked if needed. One end can be locked to the saddle bridge so you don't drop it accidentally.

Simple attachment.

Sturdy aluminum core.
2-piece design.

Easily folds in half.

Compact size stows in a pouch.

\$29.99

Ape Canyon Back Band

The best way to add support to your saddle for those long days in the tree. Simply slip the back pad around your upper or lower back and under your arms. Clip nylon webbing strap into your Bridge carabiner. Pull the side adjustments to adjust length to your liking. Lean back and relax!

- Back padded area is 29"L x 4.75"W
- Totally adjustable using the side adjustment. You're able to pull it as tight as you want or let it way out to use like a recliner.
- Won't dig into you
- Easily rolls up and stuffs away for easy transporting

#5042

\$29.99

Rappel System Hip Pack

An excellent option for those who prefer to not hang bags on their saddles. The waist belt rides above your saddle belt, allowing you to swing the bag to either side or behind you. The thigh strap can be used to keep the bag from flopping when you walk, or left unattached. Store your climbing ropes inside and use the Molle loops to clip extra gear on. In the tree you can hang it from your gear belt.

#5034

\$48.50

Large enough to hold a 40ft. rappel system for one sticking.

Primos Tall Trigger Stick

The Primos Trigger Stick Gen 3 adjusts to your desired height with just one hand and the pull of a trigger. The new Locking Leg Angles give you more stability at more angles in the field. The new Quick Detach Yoke System with integrated lock makes it easier than ever to switch from gun to optics. Adjusts from 24" to 62" height. Great for the spot and stalk hunter.

1,000' Spool

Huntin' Hoist

The Huntin' Hoist is a self retracting hunter's rope for tree stand hunters. Model #230 has 30 feet of braided rope in its tough injection molded case. The rope pays out as you climb and reels in as you lift your gear into the tree. Slack is eliminated so you never end up with 30 feet of rope in your lap or in the briars at the base of your tree. Its super duty belt clip easily attaches to your trouser or fanny pack belt as well as the strapping on any tree stand. A lanyard attachment point allows you yet another fastening option. We used it for our rappel pull down rope and found it to work very well.

As if the product wasn't unique enough it also features Doyle's Gear Cinch a patented choker that eliminates the flimsy plastic and noisy metal clasps common on hunter's utility ropes. The Cinch conforms to any shape effortlessly grasping your bow and arrow, gun or gear. Attach your gear to the Hoist with Doyle's Gear Cinch and climb. Leave your rope worries behind!

Deception Scents

Kill more than just deer. Kill your scent first.

Provides a remarkable solution to eliminate scents. Our Laundry Scent Eliminator is used to pre-treat your clothing and gear between trips to the woods. This will also remove any sour smells from your washer! This product has been around for over a decade eliminating odor in different industries. Eliminate your scent, and be more unseen! Use the Field Spray on your boots, pants and other gear for that final edge.

Field Spray

Laundry Wash

½ Gallon Laundry Wash	

Deception Body Wash

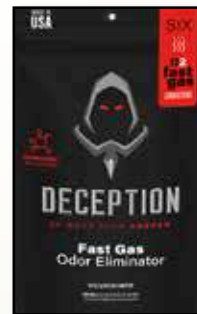

Odor eliminating body wash comes in a 16 oz. bottle and is to be used in your shower before going out to the stand. Designed for use on your skin, our hunting scent eliminator produces a thick lather that makes you more than unseen while on the hunt. Attacks the source. If you struggle with strong sweat and body odor, give this a try.

\$119.98

Titan 3D Leafy Suit

Realtree Edge Camo

Realtree Timber Camo

MossyOak Obsession Camo

Made of a strong Breathable-No-See-Um Liner, the 3D leafy suit is very breathable. Unlike traditional ghillie suits, the 3D leaves do not catch on branches or pick up twigs and stickers. The detailed deep leaf cuts make the leaves stand out more, giving you more depth in your 3D profile. A special material is used that produces a soft yet firm leaf. This causes the leaves to protrude more but also allows them to sway in the wind. The jacket has an attached hood with a draw cord to cinch up tight to your face, 2 zippered pockets and elastic on the waist. Snaps keep the front closed. The pants have elastic cuffs and an elastic waist with a locking draw cord. Carry bag included. Specify camo choice and S/M or L/XL when ordering.

#T3D

\$89.98

Ghost Blind Predator

It becomes any natural camo pattern you want it to be. Constructed of fluted polypropylene the back side of the blind has the Ghost Blind camo pattern while the mirrored panels on the front side of the blind are made of a lightweight and weather-resistance polystyrene that resists breaking or cracking. The pre-angled mirrored panels reflect the earth's ground floor and natural surroundings. The Predator Blind is a 4 panel unit made for those who want to hunt sitting comfortably in a chair. Great for hunting with gun, compound bow, crossbow or traditional bow. Blind weighs 12 lbs. 102"W x 46"H. When folded it measures approximately 16" x 25½". Includes blind, 2" carry straps, 4 tent stakes, 4 tie downs, 2 bungee cords and set up instructions.

Knots at Work

by Jeff Jepson

If you want to learn more about knots and rigging used to climb trees, here is a handy pocket-sized guide. Learn how to tie the Distel Hitch, Swabich, and many others. Just as important is the information on why and how certain hitches are used instead of others. Paperback. 185 pages.

#KNOTS

\$28.95

Kozy Kote

While not considered waterproof, this suit is very water resistant.

Finally, a good body suit for saddle hunters. Stay Kozy warm on those icy winter hunts. Magnetic arm openings, removable booties. Custom sewn slots for your saddle bridge. Must be used with a clip on type bridge. We can modify any bridge to be clip on. Call us with questions.

Rolls up into a sleeping bag size with included backpack straps. Comes with removable snap-on blaze orange vest.

The benefit of separate booties is it's much easier to put the suit on. We recommend putting the booties on first, then slipping into the legs. This keeps the suit legs cleaner inside.

Medium - under 5'10" tall
Large - over 5'10" tall

Available in Camo or Grey.

Includes:

- Suit
- 2 Booties
- Snap on orange Vest

#KOKT

\$449.00
